

Let's talk

NATURAL STONE

SILICONE

Maxisil Natural Stone is a 100% neutral cure silicone specifically designed for use on natural stone substrates, expansion joints and façade applications.

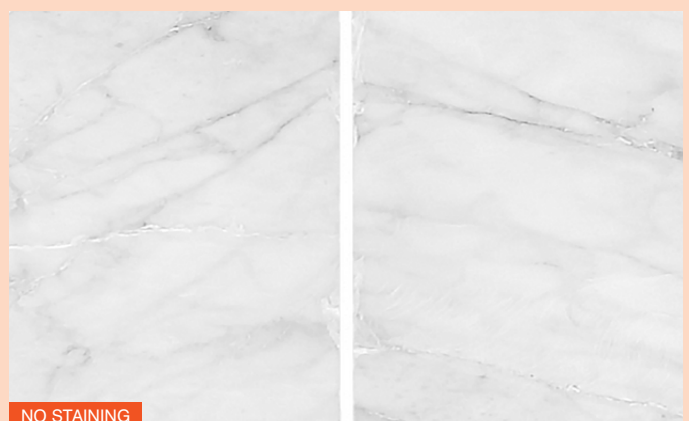

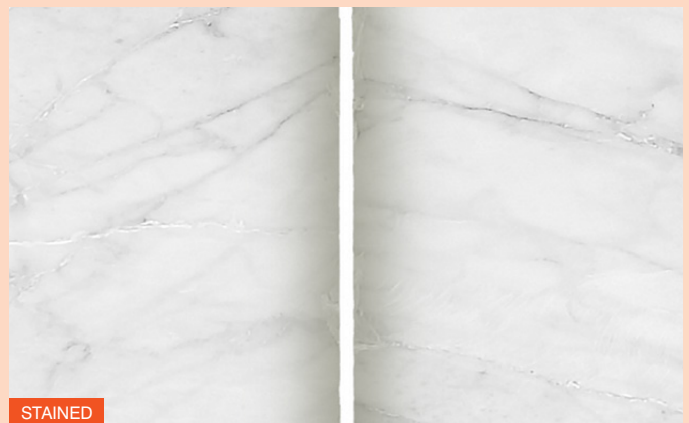

CHOOSING THE RIGHT SILICONE FOR NATURAL STONE

Natural stone, commonly used in kitchens, floors, walls, dining rooms and bathrooms, is a great choice for many reasons. Ensuring you choose the correct silicone for your intended use is critical in preventing damage to the material's surface.

Staining of natural stone is common during caulking of edges. It occurs because oils and liquids within the silicone formula penetrate the stone during application, resulting in irreversible damage. This appears as a dark 'wet-looking' stain on both sides of the joint where the silicone has been applied. However, there are solutions to prevent this, introducing Maxisil Natural Stone.

Unlike other sealants, Maxisil Natural Stone is specifically designed with in-built fungicides to fight mould and guaranteed not to stain stone.

Trusted for over 23 years by professionals, Maxisil Natural Stone was developed with harsh conditions in mind. It's easy to use and UV stable.

WHERE MAXISIL N CAN BE USED

This sealant is incredibly versatile and ideal for a wide array of applications, including:

- Marble / Granite benchtops
- Stone flooring
- Pavers
- Facades
- Expansion joints

DON'T BE CONFINED BY LIMITED COLOUR OPTIONS!

Maxisil Natural Stone is available in over 20 colours, enabling you to match your sealant with any surface or colour scheme.

We even have a matte finish range of colours, ensuring you get the desired look and finish.

To ensure you get a professional finish every time, follow the Maxisil system!

HERE IS OUR EASY GUIDE TO GETTING A PROFESSIONAL FINISH

1

REMOVE

as much of the old silicone as possible (if required).

2

CLEAN

the joint before applying silicone with **Maxisil Cleaner** (airing time approx. 1 minute) using a clean, lint-free cotton cloth.

3

CAULK

Apply **Maxisil Natural Stone silicone** using a caulking gun or similar.

4

APPLY

Apply **Maxisil Smoothing Agent (Smoothtex N)** in a spray bottle or brush. Use an applicator to finish the joint area look and shape to get a professional finish every time.

TIPS & TRICKS

Allow your silicone to cure for at least 72 hours before using the area where silicone has been applied.

Hold and use the applicator at different angles when smoothing out the silicone to achieve the desired joint size.
